

First Multinational Z-Wave Doorlock and Keypad

The Poly-Lock and Poly-Pad has been designed to fit any door at any time in any Z-wave network.

Danish company Poly-Control has been delivering building automation for holiday resorts, office building, private homes etc. for over a decade. This lead to designing and constructing this aluminum milled lock and keypad.

The design is very important to Poly-Control. Therefore the design follows the great tradition of contemporary Danish design with quality and smooth finishing.

The lock is mounted on the inside of the door directly on the existing lock, this making it possible to mount it, without having to change the entire lock, thus making it possible for everyone to make their door lock remote controlled via Z-wave commands.

The Poly-Lock can be controlled via any z-wave user interface, and of course the

Poly-Control web interface and the newly developed iPhone and Android application.

Poly-Control systems are integrated with booking systems across the globe to make running holiday resorts, office buildings easier.

The Poly-pad is making it possible not only to control the Poly-Lock, but also to control all your Z-wave components and scenarios

The Poly-Lock and the Poly-Pad also work without a gateway, this making it possible to program and use the Poly-Lock without further investments.

The Poly-Lock and the Poly-Pad are developed to meet the demands for a flexible easy to install and price friendly solution, when it comes to access control and home automation, thus making it attractive for both private and professionals.

The keywords were:

- **Easy mounting**
- **Smooth design**
- **Low cost**
- **Security**
- **Flexibility**
